

International Symposium on Interaction of the Effects of Munitions with Structures

1995

STRUCTURAL LOADING / BEARING CAPACITY		
Brian Hobbs, University of Teesside, United Kingdom	A Vulnerability Index for Bridges Subjected to Damage from Dynamic Loading	215
Theodor Krauthammer, J. L. O' Daniel, The Pennsylvania State University, U.S.A R. L. Guice, Applied Research Associates, Inc., U. S. A. Arnfinn Jenssen, Norwegian Defence Construction Service, Norway	Backfill/Backpack Effects on Shelter Response	117
Arie Boimel, TASS - Israel Industries, Israel	Behavior of Leightweight Wall Panels against Blast	487
L. Heng, Leslie J. Kennedy, G. C. Mays, Royal Military College of Science, United Kingdom	Blast Resistance of Fully Enclosed Steel - Concrete- Steel Sandwich Panels	189
Tomohiro Ando, Kazuo Fujimoto, Masayuki Ui, Hiroshi Yamaguchi, Takashi Ito, Defense Agency, Japan	Centrifugal and Numerical Simulation of Buried Structures Subjected to Blast Loadings	199
Greg C. Bessette, Mark Amend, Wright Laboratory / Armament Directorate, James E. Keller, University of Denver, U.S.A.	Damage to Buried Concrete Arch Structures from Explosions within the Earth Cover	363
Peter Hunziker, Eduard Binggeli, Gruppe für Rüstungsdienste, Switzerland	DOWPRES 93 - Determination of Wall Pressure	355
E. Canton, C. Pontiroli, A. Rouquand, French MOD/DGA/Centre d'Etudes de Gramat, France.	Dynamic Behaviour of Reinforced Concrete Slabs Under Shock Wave Loading; Numerical and Experimental Result Comparisons	509
Nobutaka Ishikawa, Tomonori Ohno, National Defense Academy, Japan Atsushi Kambayashi, Tetsuo Shirai, Takenaka Corporation, Japan	Dynamic Punching Shear Resistance of Double- Layered RC Plate	39
Robert H. Sues, Francis M. Lavelle, Graham S. Rhodes, Applied Research Ass., Inc., U.S.A.	Evaluation of Fragment Loads from General Purpose Bombs	463
J.C.A.M. van Doormaal, R.M.M. van Wees, TNO Prins Maurits Laboratory, The Netherlands	Experimental Method to Determine the Rotation Capacity and Resistance- Deformation Curve of Blast Loaded Reinforced Concrete Slabs	479
Alan J. Watson, Nebojsa Duranovic, University of Sheffield, United Kingdom	Impulsive Loading on Reinforced Concrete Slabs - Local Failure Propagation	125
J. Eibl, J. Ockert, Universität Karlsruhe, Germany	Response of Concrete Structures to Shock Loading	31

Arnfinn Jenssen, Norwegian Defence Construction Service, Norway Theodor Krauthammer, The Pennsylvania State University, U.S.A	Structural Concrete Slabs under Impulsive Loads - Findings and Recommendations	207
Frederick G. Hulton, Defence Research Agency, United Kingdom	The Behaviour of Steel-backed Reinforced Concrete Panels Under Explosive Attack	111
Stuart J. Wright, James E. Keller, R. F. Hanson, University of Denver U.S.A. Clyde Heddings, Wright Laboratory, U.S.A.	The Effects of Partially Embedded Detonations	471

INTERNAL DETONATIONS		
Günter Schekliniski-Glück; Fraunhofer Institut für Kurzzeiddynamik, Germany	A Calculation Procedure for Blast in Tunnel Branchings Developed from Experiments and Autodyn Calculations	223
Kirk A. Marchand, Charles J. Oswald, Southwest Research Institute, U.S.A.	Comparison of Predicted and Measured Blast Pressures and Structural Damage in Conventional Buildings from Small Internal Explosions	347
Gerhard H. Guerke; Fraunhofer Institut für Kurzzeiddynamik; Germany	Debris Throw from Accidental Explosions at High Loading Situations -	103
Christoph Mayrhofer, Fraunhofer Institut für Kurzzeiddynamik, Germany	Internal Blast Load on Walls 1 : 4 Scale Experiments for DIPOLE EAST	239
Philip van Dongen, R. M. van de Kastelee, J. Weerheijm TNO Prins Maurits Laboratory, Niederlande	Measurement and Prediction of Blast and Quasi-static Pressure Inside a Closed Structure	231
Charles F. Baker, John W. Pastrnak, Larry F. Simmons, Lawrence Livermore National Laboratory, U.S.A.	Measurements of a 1/4 Scale Model of a 60-kg Explosives Firing Chamber	339
Werner Heilig, P. W. Bucking, Fraunhofer Institut für Kurzzeiddynamik, Germany	Model Scale Visualizations and SHARC•Computation of Detonation Events in Multistorage Rooms	249
Mark A. Fry, Mark A. Fry & Associates, Inc., U.S.A.	Simulation of Blast and Fragment Damage inside an Enclosed Room	323
Yosef Kivity, RAFAEL, Israel, D. Palan, Protective Structures Ltd., Luxembourg	The Internal Blast Wave Produced in a Branching Tunnel by an Explosive Charge	331

PENETRATION EFFECTS		
M. J. Iremonger, Royal Military College of Science, United Kingdom	Concrete and Aggregate-Filled Sandwich Systems for Ballistic Protection	71
William F. Anderson, A. J. Watson, A. Kaminskyj, University of Sheffield, United Kingdom	Construction to Defeat Small Arms Attack	181

Alexander Lash, A. Z. Zhuk, Russia Academy of Sciences, Russia E. Zaretsky, O. Igra, Ben-Gurion University of Negev, Israel	Deformation Modes of Fiberglass	173
Jeff Peters, University of Hertfordshire, United Kingdom	DYNA3D Modelling of the Events Associated with High Velocity Projectile Penetration into Construction Materials	87
Mr. Robert H. Sues, Mr. Francis M. Lavelle, Hermann Pahl, Mark A. Cesare Applied Research Ass., Inc., U.S.A.	Fragment Penetration of Concrete: A long Overdue Update	79
Ingo Becker, M. Borrmann, Industrieanlagen-Betriebsgesellschaft mbH, Germany	Numerical Simulations about the Influence of Small Yaw Angles on Long Rod Penetrators	165
Manfred Held, Deutsche Aerospace AG, Germany	Penetration Capability of Shaped Charges against Concrete	157
Austin D. Pan, Purdue University, Joseph M. Gebara, Amoco Production Co., Jon B. Anderson, Wright Laboratory, U.S.A.	Simulation of Impact of High Kinetic-Energy Penetrators into Rock-Rubble Layers	95

PROBABILISTIC APPROACH		
James L. Drake; Joseph L. Smith, Applied Research Ass., Inc., U.S.A. Werner Heierli, Art Eiff, Heierli Consulting Engineers, Inc., Switzerland	A Technology Forecast and Assessment of Potential Conventional Weapon Threats to Fixed Land Based Facilities	397
Larry A. Twisdale, Jr., Francis M. Lavelle, M. B. Hardy, Applied Research Ass., Inc., U.S.A	Investigation of Data Fusion Models for Damage Assessment of Buried Structures	413
Francis M. Lavelle, Robert H. Sues, Applied Research Ass., Inc., U.S.A.	Reliability-Based Design for Fragment Penetration Using the DAHS CWE Manual	421
David M. Pyle, Defense Nuclear Agency, Thomas T. Baber, University of Virginia, U.S.A.	Stochastic Analysis of Structures Hardened Against Conventional Weapons Effects	405

Ground Shock		
Cornelius J. Higgins; James L. Drake, Applied Research Ass., Inc.; U.S.A.	An Engineering Approach to Soil-Structure Interaction	283
Robert W. Henny; Defense Nuclear Agency; P. Roupas, Applied Research Ass., Inc., James R. Rocco, Titan Research and Technology, U.S.A.	Detonation of a Bomb on a Buried Structure: Predictions, Design, and Results	259
Mingyang Wang, Qihu Qian, Haoyu Wang, Nanjing Engineering Institute, People's Rep. of China	Studies on Dynamic Model for Three-phase Saturated Soil Under Explosive Wave	275
Daniel E. Chitty, Scott E. Blouin, Robert E. Walker, Steven C. Lofton, Applied Research Ass., Inc., U.S.A.	Subscale Field Tests and Analysis of Systems to Attenuate Ground Shock in Wet Soils	267

Material properties		
Martin J. Schmidt, M. L. Hughes, D. M. Jerome, USAF Wright Laboratories, U.S.A. C. A. Ross, University of Florida, J. W. Tedesco, Auburn University, U.S.A. R. L. Sierakowski, Ohio State University, U.S.A.	Concrete Beams with External Carbon Fiber Reinforced Plastic Panels	149
David L. Read, Larry C. Muszynski, Applied Research Ass., Inc., U.S.A	Fiber-Reinforced Concrete Beams for Hardened Structure Construction	133
Robert A. Frank, Francis M. Lavelle, Lawrence A. Twisdale, Jr. Applied Research Ass., Inc	Fragment Hardness Analysis of Composite Materials for Airmobile Shelters Patrick J. Baker, University of Dayton Research Institute, U.S.A.	315
Friedrich-Ulf Deisenroth, IBO - Deisenroth Engineering, Germany	End-ballistic Resistance of High-performance Concrete against Small- and Medium Caliber Ammunitions	299
Christoph Mayrhofer, Fraunhofer Institut für Kurzzeitdynamik, Germany	Reinforced Composite Stabs Under Blast Loading	305
Tat Seng Lok, Nanyang Technological University, Singapore	Repeated Impact on Low - Volume Steel Fiber Reinforced Concrete Panels	141
Larry C. Muszynski, Michael Purcell, Applied Research R. L. Sierakowski, Ohio State University, U.S.A.	Strengthening Concrete Structures by Using Externally Applied Composite Reinforcing Materials	291

IN-STRUCTURE SHOCK		
Bengt Vretblad, Confortia, Sweden	Command Bunker Exposed to Weapons Effects	445
Douglas H. Merkle, Michael A. Rochefort, C. Y. Tuan, Applied Research Ass., Inc., U.S.A.	Equipment Shock Tolerance	429
Daniel Favarger, Gruppe für Rüstungsdienste, Switzerland	In-Structure Shock Measurements in Shelters - Analysis of the VAL NALPS DATA	437
Werner Heierli, Kurt Rüttsche, Heierli Consulting Engineers, Inc., Switzerland Erich Buser, Swiss Department of Defense, Switzerland	Shock Isolation Against Effects of Nuclear Attack on Multi-Storey Steel Structures for a Command Shelter in Rock	453

STRUCTURAL DESIGN		
Richard J. Jenkinson, Military Works Force, F.G. Hulton, Defense Research Agency, United Kingdom	Bosnian Bunker Trial	23
David Z. Yankelevsky, National Building Research Institute, Israel Stephan Schwarz, STAR Engineers Ltd., Israel	Demountable Prefabricated Protective Systems - From Principles to Application	47
Reuben Eytan, Eytan Building Design Ltd., Israel	Innovative Blast Resistant Structural Systems, Windows and Doors - Development and Implementation	55
Theodor Krauthammer, R. K. Otani, The Pennsylvania State University, U.S.A. H. Nickerson, NAVFAC ENG SER CTR-ECDDET, U.S.A. C. Canada, Department of Defense Explosive Safety Board, U.S.A.	Investigation of Reinforcement Details for Structural Concrete Blast Containment Facilities	5

Andrew C. Remson III, U.S. Department of State, U.S.A	Recent Terrorist Bombings and Design of U.S. Embassy Facilities in Lima, Peru	63
Frederick G. Hulton, Defence Research Agency, United Kingdom	The Use of Tripartite Protection Systems against Explosive Attack	1
George M. Zintilis, Zintilis Ass. Consulting Engineers, United Kingdom Greg E. Fairlie, Century Dynamics Limited, United Kingdom	Protection of Commercial Buildings Against Blast and Ballistic Threats	13

Computer Models / computation Basics		
Rolf van Wees, Dirk Jan Peters, TNO Prins Maurits Laboratory, Tue Netherlands	Accuracy and Range of Applicability of the Single Degree-of-Freedom Method	371
Dieter Kraus, Josef Rötzer, Universität der Bundeswehr München, Germany	A Computational Model for Concrete Structures Subjected to High Pressure and High Strain-Rates	381
Richard Westaway, Software Consultant, Brian Hobbs, University of Teesside Alan J. Watson, University of Sheffield, UK, Stuart J. Wright, L. Ulyatt, University of Denver, U.S.A.	A PC Based Program for Blast Load Analysis and Damage Estimation of Multi-Storey Buildings and Their Contents	503
Alex Wong, University of Hertfordshire, United Kingdom	Computer Modelling of Building Cladding Systems Designed for Grid-Effects	495
Timothy A. Rose; PD Smith, GC Mays, Royal Military College of Science; United Kingdom	Design Charts Derived from Blast Wall Leakage Pressure Measurements	389
